

B. Evidence-status matrix based on verified statistical outputs		Allen healthy discovery	PBMC disease-context	Plaque single-cell	IPH bulk plaque
GZMK-associated feature		Supported GZMK+ state p=0.0309	Trend GZMK-like score p=0.0757	Trend; higher asymptomatic p=0.0952	Supported; higher IPH GZMK-like score p=0.000343
Broader cytotoxic/NK program		Not directly tested	Supported cytotoxic core p=0.00451	Not quantified in Table S5	Supported; higher IPH cytotoxic/NK effector p=0.000068
NKG7-associated feature		Not directly tested	Supported NKG7 p=0.00932	Not quantified in Table S5	Supported; higher IPH NKG7 p=0.000172
NK-cell abundance/proportion		Supported GZMK+ NK abundance p=0.0309	Supported NK resting proportion p=0.01144	Not tested	Not attributable from bulk tissue

Supported: nominal $p < 0.05$; Trend: $0.05 \leq p < 0.10$. Panel reports verified feature-level evidence only; no pathway-level FDR claims are made.
